

LETTER OF RECOMMENDATION

To Whom It May Concern,

I am pleased to recommend Jace Morales for the position of Full Stack Web and Mobile Developer.

Having worked with Jace Morales for over two years at Pixel Hub Digital, I have had the opportunity to witness firsthand his growth, technical ability, and dedication to software development. During this time, he has demonstrated strong proficiency in developing modern web and mobile applications, working across both frontend and backend environments to build functional, responsive, and scalable solutions.

Jace has practical experience across a broad range of technologies, with particular strength in JavaScript, TypeScript, React.js, Next.js, Node.js, Express.js, Python, Django, FastAPI, PHP, Laravel, React Native, Flutter, PostgreSQL, MySQL, MongoDB, REST APIs, Git, Docker, and cloud technologies such as AWS. His ability to work across different layers of an application allows him to approach development from a complete full-stack perspective rather than focusing on only one area of a project.

One of Jace's notable strengths is his ability to take a project from the initial interface and application structure through backend development, database integration, API implementation, and deployment. He understands the importance of creating applications that are not only visually functional but also maintainable, performant, secure, and capable of supporting future growth.

Beyond his technical capabilities, Jace is a motivated, adaptable, and solution-oriented professional. He approaches complex development challenges with determination and demonstrates the ability to learn new technologies and adapt to changing project requirements. He is also capable of working independently while collaborating effectively with other members of a development team.

I have been particularly impressed by his willingness to continuously expand his technical knowledge and explore new technologies across web development, mobile development, backend engineering, databases, cloud infrastructure, and modern software development practices. This combination of technical versatility and a strong willingness to learn makes him well suited to dynamic development environments.

Based on my experience working with Jace, I am confident that he would be a valuable addition to any organization seeking a Full Stack Web and Mobile Developer who can contribute across the software development lifecycle.

I strongly recommend Jace Morales for the position and believe he has the technical ability, dedication, and problem-solving mindset required to make meaningful contributions to a development team.

Please feel free to contact me at pixel.users818@gmail.com should you require any further information regarding Jace's experience or capabilities.

Sincerely,

Eleazar Stanford

Head of Operations
